# PAYPOINT WINDOWS

Gunnebo Paypoint Windows are installed within office walls, doors or partitioning to protect against physical or ballistic attack. Four models offer a choice of protection levels for both internal and external environments.

## DESIGN FRAME AND TRAY

All the windows feature a stainless-steel frame and transaction tray. The tray is available in a range of sizes and the frame allows natural voice transference in both directions.

## BASE

All internal windows are fitted with a rectangular base which is inlaid with linoleum (blue/grey as standard) and finished at the edges in ash veneer. For deeper transaction trays (PW1), an additional box is fitted beneath the base, with a Wedgwood blue laminate finish.

## EXTERNAL WINDOWS

The external windows (PW4) features a spring-hinged transaction tray which folds and locks against the frame. When the tray is open it provides a 25mm deep tray and natural voice transference. When closed, draughts are fully excluded.

PW1

PW2

## AVAILABLE MODELS

The suitability of the window for internal and external environments, wall, partition or door installation, larger or smaller documents is detailed in table 1 below.

APPLICATIONS

Paypoint windows are suitable for protecting cash and staff in all areas where there is a possible risk of robbery or violent assault. Ticket offices, payment booths and cash offices are usual environments in which the windows are used.

When specifying installations, note that all surrounding walls, doors and partitioning should provide levels of protection against attack which are equivalent or higher than levels offered by the windows.

SERVICE AND MAINTENANCE

A range of maintenance and customer support contracts are available if required.
